Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nohira et al. (U.S. Patent No. 5,690,858) in view of Cole (U.S. Patent No. 5,498,368).

Nohira et al. discloses a bistable liquid crystal cell and use thereof in a liquid crystal display device, said cell comprising a ferroelectric siloxane compound having a smectic C phase arranged between alignments layers of a polyamide or a polyester (column 1, line 38+; column 2, line 29+; column 6, line 36+; column 40, line 48+; claims). However, the ferroelectric compound utilized therein is not quite inclusive of the ferroelectric siloxane compound of the instant claims.

Cole discloses a siloxane oligomer inclusive of that of the instant claims, which results in optimum high tilt angles substantially independent of temperature over a broad temperature range.

It would have been obvious to one of ordinary skill in the requisite art at the time the invention was made to substitute the siloxane oligomers taught in Cole for those utilized in Nohira et al., with reasonable expectations of achieving, absent object evidence to the contrary, the advantages taught therein as well as those achieved with respect to tilt angles through the use thereof of the siloxane oligomers of Cole.
